

Cold Starting/Hard Starting Tip

This bulletin covers the following Champion Power Equipment models:

Champion Power Equipment products with the following engines:

338 cc

389 cc

Note: Read instructions completely before performing service.

No tools required.

This technique provides more fuel to the engine to assist with hard-starting generators (e.g. cold weather starts).

1. Choke the engine as usual.
2. Facing the recoil side of the engine, locate the governor arm. It is located above the recoil assembly and connects the carburetor to the engine governor.
3. Push the governor arm to the left (towards the carburetor) to the full idle position. Release the arm as you crank the engine.
4. Once the engine starts, push in the choke.
