**SAVE THESE INSTRUCTIONS.** This manual contains important safety precautions which should be read and understood before operating the product. Failure to do so could result in serious injury. This manual should remain with the product.

Specifications, descriptions and illustrations in this manual are as accurate as known at the time of publication, but are subject to change without notice.

MANA

#### CARBON MONOXIDE SAFETY: THE BIG PICTURE

As the only safe way to use a portable generator, taking your generator outside is absolutely mandatory to keep your family safe from carbon monoxide. But there's even more you can do. By educating yourself about all carbon monoxide risks, you'll be better prepared to protect your family from this colorless, oderless threat.

#### INTRODUCTION

Congratulations on your purchase of a Champion Power Equipment (CPE) product. CPE designs, builds, and supports all of our products to strict specifications and guidelines. With proper product knowledge, safe use, and regular maintenance, this product should bring years of satisfying service.

Every effort has been made to ensure the accuracy and completeness of the information in this manual at the time of publication, and we reserve the right to change, alter and/or improve the product and this document at any time without prior notice.

CPE highly values how our products are designed, manufactured, operated, and serviced as well as providing safety to the operator and those around the generator. Therefore, it is IMPORTANT to review this product manual and other product materials thoroughly and be fully aware and knowledgeable of the assembly, operation, dangers and maintenance of the product before use. Fully familiarize yourself, and make sure others who plan on operating the product fully familiarize themselves too, with the proper safety and operation procedures before each use. Please always exercise common sense and always err on the side of caution when operating the product to ensure no accident, property damage, or injury occurs. We want you to continue to use and be satisfied with your CPE product for years to come.

When contacting CPE about parts and/or service, you will need to supply the complete model and serial numbers of your product. Transcribe the information found on your product's nameplate label to the table below

# CPE TECHNICAL SUPPORT TEAM 1-877-338-0999 MODEL NUMBER 200953 SERIAL NUMBER DATE OF PURCHASE PURCHASE LOCATION

#### **SAFETY DEFINITIONS**

The purpose of safety symbols is to attract your attention to possible dangers. The safety symbols, and their explanations, deserve your careful attention and understanding. The safety warnings do not by themselves eliminate any danger. The instructions or warnings they give are not substitutes for proper accident prevention measures.

#### **A** DANGER

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

#### **A** WARNING

WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

#### **A** CAUTION

CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

#### NOTICE

NOTICE indicates information considered important, but not hazard-related (e.g., messages relating to property damage).

#### **IMPORTANT SAFETY INSTRUCTIONS**

#### **A WARNING**

Cancer and Reproductive Harm - www.P65Warnings.ca.gov

#### **A** DANGER

Generator exhaust contains carbon monoxide, a colorless, odorless, poisonous gas. Breathing carbon monoxide will cause nausea, dizziness, fainting or death. If you start to feel dizzy or weak, get to fresh air immediately.

# OPERATE GENERATOR <u>OUTDOORS</u> ONLY IN A WELL VENTILATED AREA AND POINT EXHAUST AWAY.

DO NOT operate the generator inside any building, including garages, basements, crawlspaces and sheds, enclosure or compartment, including the generator compartment of a recreational vehicle.

DO NOT allow exhaust fumes to enter a confined area through windows, doors, vents or other openings.

#### **A** DANGER

Using a generator indoors **CAN KILL YOU IN MINUTES**. Generator exhaust contains carbon monoxide. This is a poison you cannot see or smell.

**NEVER** use inside a home or garage, **EVEN IF** doors and windows are open.

**ONLY** use **OUTSIDE** and far away from windows, doors, and vents.

Install battery-operated carbon monoxide alarms or plug-in carbon monoxide alarms with battery back-up according to the manufacturer's instructions.

#### **A WARNING**

Although the generator contains a spark arrester, maintain a minimum distance of 5 ft. (1.5 m) from dry vegetation to prevent fires.

#### **A** DANGER

Operate equipment with guards in place.

Rotating parts can entangle hands, feet, hair, clothing and/or accessories. Traumatic amputation or severe laceration can result.

Keep hands and feet away from rotating parts.

Tie up long hair and remove jewelry.

DO NOT wear loose-fitting clothing, dangling drawstrings or items that could become caught.

#### **A** DANGER

Generator produces powerful voltage.

DO NOT touch bare wires or receptacles.

DO NOT use electrical cords that are worn, damaged or frayed. Use only Champion electrical cords for proper application.

DO NOT operate generator in wet weather.

DO NOT allow children or unqualified persons to operate or service the generator.

Use a ground fault circuit interrupter (GFCI) in damp areas and areas containing conductive material such as metal decking.

Connection to your home's electrical system requires a listed 30A transfer switch installed by a licensed electrician and approved by the local authority having jurisdiction. The connection must isolate the generator from the utility power and must comply with all applicable laws and electrical codes.

#### **A** WARNING

Do not use generator for medical and life support uses.

In case of emergency, call 911 immediately.

NEVER use this product to power life support devices or life support appliances.

NEVER use this product to power medical devices or medical appliances.

Inform your electricity provider immediately if you or anyone in your household depends on electrical equipment to live.

Inform your electrical provider immediately if a loss of power would cause you or anyone in your household to experience a medical emergency.

#### **A WARNING**

Spark from removed spark plug wire can result in fire or electrical shock.

#### When servicing the generator:

Disconnect the spark plug wire and place it where it cannot contact the plug or any other metal object.

DO NOT check for spark with the plug removed.

Use only approved spark plug testers.

#### **A** WARNING

Running engines produce heat. Severe burns can occur on contact. Combustible material can catch fire on contact.

DO NOT touch hot surfaces.

Avoid contact with hot exhaust gases.

Allow equipment to cool before touching.

Maintain at least 3 ft. (91.4 cm) of clearance on all sides to ensure adequate cooling.

Maintain at least 5 ft. (1.5 m) of clearance from combustible materials.

#### **A WARNING**

Rapid retraction of the recoil cord will pull hand and arm towards the engine faster than you can let go. Broken bones, fractures, bruises or sprains could result. Unintentional startup can result in entanglement, traumatic amputation or laceration.

When starting engine, pull the recoil cord slowly until resistance is felt and then pull rapidly to avoid kickback.

DO NOT start or stop the engine with electrical devices plugged in and turned on.

#### **A CAUTION**

Exceeding the generator's running capacity can damage the generator and/or electrical devices connected to it.

DO NOT overload the generator.

DO NOT tamper with the governed speed.

DO NOT modify the generator in any way.

#### **A** CAUTION

Improper treatment or use of the generator can damage it, shorten its life or void the warranty.

Use the generator only for intended uses.

Operate only on level surfaces.

DO NOT expose generator to excessive moisture, dust, or dirt.

DO NOT allow any material to block the cooling slots.

If connected devices overheat, turn them off and disconnect them from the generator.

#### DO NOT use the generator if:

- Electrical output is lost
- Equipment sparks, smokes or emits flames
- Equipment vibrates excessively

#### **A** WARNING

This product contains a button battery. If swallowed, it could cause severe injury or death in just 2 hours. Seek medical attention immediately.

#### **Fuel Safety**

#### **A** DANGER

# GASOLINE AND GASOLINE VAPORS ARE HIGHLY FLAMMABLE AND EXPLOSIVE.

Fire or explosion can cause severe burns or death.

#### Gasoline and gasoline vapors:

- Gasoline is highly flammable and explosive.
- Gasoline can cause a fire or explosion if ignited.
- Gasoline is a liquid fuel but it's vapors can ignite.
- Gasoline is a skin irritant and needs to be cleaned up immediately if spilled on skin or clothes.
- Gasoline has a distinctive odor, this will help detect potential leaks quickly.
- Gasoline expands or contracts with ambient temperatures.
   Never fill the gasoline tank to full capacity, as gasoline needs room to expand when temperatures rise.
- In the case of any petroleum gasoline fire, flames should never be extinguished unless the fuel supply valve can be turned OFF. By not doing so, if a fire is extinguished and the supply of fuel is not turned OFF, an explosion hazard could be created.

#### When adding or removing gasoline:

DO NOT light or smoke cigarettes.

Turn the generator off and let cool for at least two minutes before removing the gasoline cap. Always loosen the cap slowly to relieve pressure in the tank.

Only fill or drain gasoline outdoors in a well-ventilated area.

DO NOT pump gasoline directly into the generator at the gas station. Always use an approved container to transfer the fuel to the generator.

DO NOT overfill the gasoline tank.

Always keep gasoline away from sparks, open flames, pilot lights, heat and other sources of ignition.

#### When starting the generator:

DO NOT attempt to start a damaged generator.

Always check that the gasoline cap, air filter, spark plug, fuel lines and exhaust system are properly in place.

Always allow spilled gasoline to evaporate fully before attempting to start the engine.

Always be certain that the generator is resting firmly on level ground.

#### When operating the generator:

DO NOT move or tip the generator during operation.

#### When transporting or servicing the generator:

Always check that the fuel valve is in the OFF position and the gasoline tank is empty.

For LPG compatible models, check that the LPG cylinder is disconnected and stored securely away from the generator.

Disconnect the spark plug wire.

#### When storing the generator:

Store away from sparks, open flames, pilot lights, heat and other sources of ignition.

Do not store generator, gasoline or LPG cylinders near furnaces, water heaters, or any other appliances that produce heat or have automatic ignitions.

#### **A** DANGER

NEVER place a gasoline container, gasoline tank, LPG cylinder or any combustible material in the path of the exhaust stream during operation of the engine.

#### **A WARNING**

Never use a gasoline container, gasoline tank, or any other fuel item that is broken, cut, torn or damaged.

#### **Safety and Dataplate Labels**

These labels warn you of potential hazards that can cause serious injury. Read them carefully.

If a label comes off or becomes hard to read, contact Technical Support Team for possible replacement.

#### **Safety Symbols**

Some of the following symbols may be used on this product. Please study them and learn their meaning. Proper interpretation of these symbols will allow you to more safely operate the product.

SYMBOL	MEANING	
	Read Operator's Manual. To reduce the risk of injury, user must read and understand operator's manual before using this product.	
↑ 5ft/1.5m	<b>Clearance.</b> Keep all objects at least 5 feet (1.5m) from generator. Heat from the muffler and exhaust ga can ignite combustible objects.	
	<b>Ground.</b> Consult with local electrician to determine grounding requirements before operation.	
<u>A</u>	<b>Electric Shock.</b> Failure to use in dry conditions and to observe safe practices can result in electric shock. Improper connections to a building can allow current to backfeed into utility lines, creating an electrocution hazard. A transfer switch must be used when connecting to a building.	
	Fire/Explosion. Fuel and its vapors are extremely flammable and explosive. Fire or explosion can cause severe burns or death. Keep generator at least 5 feet (1.5m) from all objects to prevent combustion.	
	Hot Surface. To reduce the risk of injury or damage, avoid contact with any hot surface.	
S	Open Flame Alert. Fuel and its vapors are extremely flammable and explosive. Keep fuel away from smoking, open flames, sparks, pilot lights, heat, and other ignition sources.	
Wet Conditions Alert. Do not expose to rain or use in damp locations except as follows:		
	If you must operate in rain or damp locations, DO NOT operate without proper protection of the electrical components.	
	Use of a safety canopy that is fire retardant and will provide proper air ventilation for the engines exhaust stream can be used. Keep all objects a minimum of 5 feet (1.5m) away from the generator at all times. Heat from the muffler surface and exhaust stream can ignite combustible materials.	

#### **Operation Symbols**

Some of the following symbols may be used on this product. Please study them and learn their meaning. Proper interpretation of these symbols will allow you to more safely operate the product.

	SYMBOL		MEANING
4		<b>じ</b>	Start
		<b>じ</b>	Stop/Standby
	(0)		Wireless Pair button
			Overload Reset button

	\		Choke
	+		Run
	12 V		12V Direct Current
			RV Ready Receptacle
	3+		Circuit Breaker Reset: Push

SYM	IBOL .	MEANING
<b>三</b> +6	<b>)</b> I	Parallel Connection(s)
N	<u>.</u>	Neutral Floating. Neutral circuit IS NOT electrically connected to the frame/ground of the generator.
	Ñ	Fuel/Gasoline Valve On/Off
		Gasoline Tank: Full
		Gasoline Tank: Empty
~	^	Hertz
7		Volts
	9	Run time

#### **Quick Start Label Symbols**

Some of the following symbols may be used on this product. Please study them and learn their meaning. Proper interpretation of these symbols will allow you to more safely operate the product.

#### **Starting the Engine**

#### **A** DANGER

Move generator outside and far away from windows, doors and intake ventilation covers.

#### 1. Check oil level.

Recommended oil is 10W-30.

#### 2. Check gasoline level.

When adding gasoline, use a minimum octane rating of 87 and an ethanol content of 10% or less by volume.

- 3. Turn the fuel valve to "ON" position.
- 4. Press the START/STOP button once.

#### 5. Choke engine

- 5a. Press the choke button, or
- 5b. Move choke lever to "CHOKE" position.
- 6. Pull the recoil cord.

#### 7. Run engine

- 7a. Press the choke button, or
- 7b. Move the choke lever to "RUN" position.
- 8. Plug in desired device.

#### **Stopping the Engine**

- 1. Turn off and unplug all connected electrical loads.
- 2. Press the START/STOP button once.
- 3. Turn the fuel valve to "OFF" position.

#### **Wireless and Electric Start**

See page 22 in "Operation" section.

#### **CONTROLS AND FEATURES**

Read this operator's manual before operating your generator. Familiarize yourself with the location and function of the controls and features. Save this manual for future reference.

#### **Generator**

- 1. Gasoline Gauge
- 2. Gasoline Tank 4 gal. (15.2 L)
- 3. Fuel Cap Remove to add fuel.
- 4. Fuel Valve Used to turn fuel supply on and off to engine.
- 5. **Air Filter** Protects the engine by filtering dust and debris from the intake air.
- 6. Recoil Starter Used to manually start the engine.
- 7. Never Flat Wheels -8 in. (20.3 cm)

- 8. **Control Panel** See *Control Panel* section.
- 9. **Battery** Provides 12V DC power to the starting system.
- 10. Muffler
- 11. Oil Fill Cap/Dipstick Used to check and fill oil level.
- 12. **Folding Handle** Used to move unit by lifting and rolling on wheels. Do not use to lift or carry the unit.
- 13. Remote Key Fob Storage
- 14. Choke Used to start a cold engine.

#### **Control Panel**

- 1. Wireless Set/Reset Used to reset or pair remote control(s).
- AC Overload Reset Button Used to re-energize receptacles after overload fault.
- 3. **Low Oil Warning Indicator Light** When ON, engine will shut down and not run. Check oil level.
- Economy Mode Button Enables/disables automatic idle control.
- 5. **Choke** Used to start a cold engine.
- 6. **Intelligauge** Four mode digital meter for displaying voltage, frequency (hertz), run time, and total run time
- 7. START/STOP Push Button
- 8. **Parallel Outlets** Used to parallel two inverters together for increased power output. (parallel kit sold separately).
- Circuit Breakers (Push Reset) Protects the generator against electrical overloads.
- 10. **Ground Terminal** Consult an electrician for local grounding regulations.

	RECEPTACLES		
A		12V DC, 8A (Regulated Automotive) May be used to supply electrical power for operation of 12 Volt DC, 8 Amp electrical loads.	
В	•	120V AC, 30A RV (NEMA TT-30R) May be used to supply electrical power for operation of 120 Volt AC, 30 Amp, single phase, 60 Hz electrical loads.	
С	4	(2×) 120V AC, 20A (NEMA 5-20R)  May be used to supply electrical power for operation of 120 Volt AC, 20 Amp, single phase, 60 Hz electrical loads.	

#### **A WARNING**

Do not operate a device while it is plugged into the 12V DC outlet. When charging a device, do not place on the exhaust side of the generator. Extreme heat caused by exhaust can damage the device and cause a potential fire hazard. Prolonged exposure to engine exhaust can cause serious injury or death.

#### Intelligauge

Four mode digital meter for displaying voltage, frequency (hertz), run time, and total run time.

The LCD displays each mode by pressing the button below the display.

MODE	DESCRIPTION	
	Output voltage of the generator.	
Voltage (V)	Example: 120 volts	
	Output frequency in hertz.	
Frequency (F)	Example: 60.0 hertz	FED.D
	Run time of the generator for the current session	
Run Time (R)	Example: 6 hours	H [] E. []
	Total run time of the generator since first operation	
Total Run Time	Example: 16 hours	

#### **Wireless Remote Control**

This generator is equipped with a wireless remote control system for starting and stopping. The system consists of (4) main components:

- 1. Receiver Control Module (RCM)
- 2. Remote Control
- 3. Start/Stop button
- 4. Auto-Choke

#### The Remote Control functions are enabled when:

 The START/STOP button is in "STANDBY" mode and flashes green once per second.

The Remote Control functions are disabled when the above condition is not met

To start the generator wirelessly, press the "START" button on the Remote Control one time to enter standby mode, indicated by the START/STOP button on control panel flashing green once per second. Press the "START" button on the Remote Control again to start the engine. The engine will attempt to start (6) times. The RCM controls the Auto-Choke during each attempt to start. If the generator does not start, call Champion Customer Care team for assistance at 1-877-338-0999.

To stop the generator wirelessly, press the "STOP" 🖏 button on the Remote Control one time.

#### **Remote Control Power Consumption**

While the START/STOP button is in "STANDBY" mode and flashing green once per second, the RCM is active and waiting for a remote signal. This standby function requires a small amount of electrical current from the battery and will shut off automatically after 12 hours.

Pushing and holding the "STOP" button on the remote control for 5 seconds or pushing and holding the START/STOP button on the control panel for 5 seconds disables the standby function manually and the RCM will no longer consume any battery power or wait for remote signal. This is indicated by the START/STOP button no longer flashing.

#### **FCC Statement for Remote Control Device**

- 1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
  - 1a. This device may not cause harmful interference.
  - This device must accept any interference received, including interference that may cause undesired operation.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

#### **A** NOTICE

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult dealer or an experienced radio/TV technician for help.

#### **Parts Included**

#### Accessories

Dual Port USB Adapter (5v/2.4A)	1
Remote Key Fob	1
Engine Oil	20.3 fl. oz. (600 ml)
Oil Funnel	1
Assembly Parts	
Wheels	
8 in. (20.3 cm) Never Flat Wheel (A)	2
Wheel hub caps (B)	2
Roll Pin (C)	2
Large R-clip (D)	2
Engine Vibration Mounts	
Support Leg with Vibration Mounts (E)	)
Flange Lock Nut (M8) (F)	
Folding Handle	
Handle (G)	1
Short Pin (H)	1
Small R-clip (I)	1

#### **Tools Needed**

Wrench/Socket set (metric)

#### **ASSEMBLY**

Your generator requires some assembly. This unit ships from our factory without oil. It must be properly serviced with fuel and oil before operation.

If you have any questions regarding the assembly of your generator, call our Technical Support Team at 1-877-338-0999. Please have your serial number and model number available.

#### **Unpacking**

- 1. Set the shipping carton on a solid, flat surface.
- 2. Remove everything from the carton except the generator.
- Carefully cut each corner of the box from top to bottom. Fold each side flat on the ground to provide a surface area to work with the generator.

#### **Remove Shipping Support Spacers**

To protect the generator during shipping, support spacers have been installed between the engine and frame. These spacers MUST BE REMOVED BEFORE adding oil or gasoline to the generator.

#### NOTICE

DO NOT attempt to run generator without first removing the shipping support spacers. Damage to the generator as a result of not removing the spacers will void the warranty.

- BEFORE filling the engine with oil or gasoline, tip the generator onto its side as shown. Tip onto the flattened cardboard box the generator came in or other protective surface so as to not scratch the frame.
- Remove the bolts from the orange support spacers and remove the spacers while lightly lifting the engine. Bolts and spacers can be discarded.

3. Tip the generator upright.

#### Install the Wheel Kit

#### **A** CAUTION

The wheel kit is not intended for over-the-road use.

#### **Install the Wheels**

- 1. Before adding fuel and oil, carefully tip the generator onto the control panel side.
- 2. Remove wheel hub cap (B) from wheel by inserting a small screwdriver into the slot provided and pry upward.
- 3. Slide the roll pin (C) through the wheel (A) from the outside.
- 4. Slide the roll pin through the mount point on the frame.
- 5. Insert r-clip (D) into hole at end of roll pin.
- 6. Re-install hub cap on wheel.
- 7. Repeat to attach the second wheel.

#### **Install the Support Leg**

1. Remove the rubber sheaths from the welded bolts.

2. Attach the support leg (E) to the generator frame with flange lock nuts (F).

3. Slowly tip the generator back down so that it rests on the wheels and support leg.

#### **Install the Handle**

- 1. Place the handle (G) inside the mounting channel on the frame.
- 2. Secure the handle to the frame using an short pin (H).
- 3. Place an r-clip (I) on the end of the short pin and fasten securely.

#### **Connect the Battery**

- 1. Cut cable tie on each side of battery connector.
- 2. Push two halves of battery connector together tightly.

#### **Add Engine Oil**

#### **A** CAUTION

DO NOT attempt to crank or start the engine before it has been properly filled with the recommended type and amount of oil. Damage to the generator as a result of failing to follow these instructions will void your warranty.

#### NOTICE

The generator rotor has a sealed, pre-lubricated ball bearing that requires no additional lubrication for the life of the bearing.

#### NOTICE

The recommended oil type for typical use is **10W-30** automotive oil. However, using the listed conventional oils shown in the "Recommended Engine Oil Type" chart may be used for typical use including the first 5 hours of the break-in run time period of the engine.

If running generator in extreme temperatures, refer to the "Recommended Engine Oil Type" chart.

- 1. Place the generator on a flat, level surface.
- 2. Remove oil fill cap/dipstick to add oil.
- 3. Using a funnel, add up to 18.6 fl. oz. (550 ml) of oil (included) and replace oil fill cap/dipstick. DO NOT OVERFILL.

4. Check engine oil level at every use and add as needed.

#### NOTICE

Check oil level often during the break-in period. Refer to the *Maintenance* section for recommended service intervals.

#### **A** CAUTION

This engine is equipped with a low oil shut-off and will stop when the oil level in the crankcase falls below the threshold level.

#### NOTICE

The first 5 hours of run time are the break-in period for the unit. During the break in period stay at or below 50% of the running watt rating and vary the load occasionally to allow stator windings to heat and cool. Adjusting the load will also cause engine speed to vary slightly and help seat piston rings. After the 5 hour break-in period, change the oil.

#### NOTICE

Synthetic oil may be used after the 5 hour initial break-in period. Using synthetic oil does not decrease the recommended oil change interval. Full synthetic 5W-30 oil will aid in starting in cold ambient < 41° F (5° C) temperatures.

#### **Add Fuel**

#### **A** DANGER

Gasoline vapors are highly flammable and extremely explosive.

DO NOT light or smoke cigarettes. Fire or explosion can cause severe burns or death.

Only fill or drain fuel outdoors in a well-ventilated area.

DO NOT pump gasoline directly into the generator. Use an approved container to transfer the fuel to the generator.

Never use a gasoline container, gasoline tank, or any other fuel item that is broken, cut, torn or damaged.

DO NOT overfill the gasoline tank. Always keep fuel away from sparks, open flames, pilot lights, heat and other sources of ignition.

DO NOT mix oil with gasoline.

- 1. Remove the gasoline cap.
- 2. Slowly add gasoline to the tank. Tank is full when gasoline reaches red circle on screen. DO NOT OVERFILL. Gasoline can expand after filling. A minimum of ¼ in. (6.4 mm) of space left in the tank is required for gasoline expansion, although more than ¼ in. (6.4 mm) is recommended. Gasoline can be forced out of the tank as a result of expansion if overfilled, and can affect the stable running condition of the generator. The approximate fuel level is shown on the fuel gauge on top of the fuel tank.

The approximate fuel level is shown on the fuel gauge on top of the fuel tank.

4. Screw on the gasoline cap and wipe away any spilled fuel.

#### **A** CAUTION

Use unleaded gasoline with a minimum octane rating of 87 and an ethanol content of 10% or less by volume.

DO NOT light cigarettes or smoke when filling the tank.

DO NOT mix oil and gasoline.

DO NOT overfill the tank. Fill tank to approximately  $\frac{1}{4}$  in. (6.4 mm) below the top of the tank to allow for gasoline expansion.

DO NOT pump gasoline directly into the generator at the pump. Use an approved fuel container to transfer the gasoline to the generator.

DO NOT fill tank indoors.

DO NOT fill tank when the engine is running or hot.

#### **A WARNING**

Pouring gasoline too fast through the fuel screen may result in gasoline splashing over the generator and operator while filling.

#### NOTICE

The generator engine works well with 10% or less ethanol blended gasoline. When using ethanol-gasoline blends there are some issues worth noting:

- Ethanol-gasoline blends can absorb more water than gasoline alone.
- These ethanol blends can eventually separate, leaving water or a watery goo in the tank, fuel valve and carburetor. The compromised gasoline can be drawn into the carburetor and cause damage to the engine and/or create potential hazards.
- If a fuel stabilizer is used, confirm that it is formulated to work with ethanol-gasoline blends.
- Any damages or hazards caused by using ethanol blended gasoline higher than 10% by volume, improperly stored gasoline, and/or improperly formulated stabilizers, are not covered by manufacturer's warranty.

It is advisable to always shut off the gasoline supply and run the engine to starvation after each use. See Storage instructions for extended non-use.

#### Grounding

Your generator must be properly connected to an appropriate ground to help prevent electric shock.

#### **A WARNING**

Failure to properly ground the generator can result in electric shock.

A ground terminal connected to the panel of the generator has been provided (see Controls and Features for terminal location). For remote grounding, connect a length of heavy gauge (12 AWG minimum) copper wire between the generator ground terminal and a copper rod driven into the ground. We strongly recommend that you consult with a qualified electrician to ensure compliance with local electrical codes.

#### **Neutral Floating\***

- Neutral circuit IS NOT electrically connected to the frame/ ground of the generator.
- The generator (stator winding) is isolated from the frame and from the AC receptacle ground pin.
- Electrical devices that require a grounded receptacle pin connection will not function if the receptacle ground pin is not functional.

#### **Neutral Bonded to Frame\***

- Neutral circuit IS electrically connected to the frame/ground of the generator.
- The generator system ground connects lower frame crossmember below the alternator. The system ground is connected to the AC neutral wire.

#### **OPERATION**

#### **Generator Location**

#### **A WARNING**

NEVER operate the generator inside any building, garage, basement, crawlspace, shed, enclosure or compartment, including a generator compartment of a recreational vehicle.

NEVER operate or start the generator in the back of an SUV, camper, trailer, truck bed (regular sides, flat or other configuration), under staircases, stairwells, next to walls or buildings or in any other location that will not allow for adequate cooling of the generator or for the proper exit of the exhaust flow from the muffler system.

DO NOT operate or store the generator in wet weather conditions such as rain or snow. Using a generator in wet conditions could result in serious injury or death due to electrocution.

In some state's generators may be required to be registered with the local utility company when used at construction sites and may be subject to additional rules and regulations, consult your local municipal authority.

Generators should always be operated on a flat, level surface at all times (even when not in operation).

Generators must have a minimum of 5 feet (1.5 m) of clearance from all combustible material.

Generators must also have a minimum of 3 feet (91.4 cm) of air flow clearance on all sides to allow for adequate performance cooling, maintenance and servicing.

Always place the generator in a well-ventilated area. NEVER place the generator near air intake vents or where exhaust fumes could be drawn into occupied or confined spaces.

Always carefully consider wind and air currents when positioning generator.

Always allow generators to properly cool before transport or for storage purposes.

Failure to follow proper safety precautions may result in personal injury, damage to the generator and void the manufacturer's warranty.

#### **A WARNING**

During operation the muffler and exhaust fumes will become hot. If adequate cooling and breathing space are not supplied, or if the generator is blocked or enclosed, temperatures can become extremely heated and may lead to fire.

#### **Surge Protection**

Electronic devices, including computers and many programmable appliances use components that are designed to operate within a narrow voltage range and may be affected by momentary voltage fluctuations. While there is no way to prevent voltage fluctuations, you can take steps to protect sensitive electronic equipment.

 Install UL1449, CSA-listed, plug-in surge suppressors on the outlets feeding your sensitive equipment.
 Surge suppressors come in single- or multi-outlet styles.
 They're designed to protect against virtually all short-duration voltage fluctuations.

#### **Wireless Set Button**

The wireless set button is a feature that lets the user synchronize the remote key fob to the generator. Up to two remote key fobs can be synchronized to the generator at a time. Follow the proceeding steps to reset a remote or synchronize two remotes:

1. Press the START/STOP button once on the front panel of the generator. The button will flash green once per second.

 Push and hold the wireless set button for approximately three
 seconds. The wireless set button will illuminate blue and the START/STOP button will stop flashing.

<sup>\*</sup>See your Specifications section for specified type of grounding.

Push and release the STOP button on the remote key
fob. The START/STOP button will flash green once and the
wireless set button will flash blue once to indicate the remote
program has been erased.

4. Push and release the START button on the remote. The START/STOP button will flash green once and the wireless set button will flash blue once and again illumniate blue to indicate the remote has been programmed.

- Push and hold the wireless set button for approximately three
   seconds until the blue light of the wireless set button goes out, and the green light of the START/STOP button flashes once per second indicating it is in "STANDBY" mode.
- Press the START button on the remote to start the engine and follow the remote STOP instructions to verify the remote(s) are working properly.

#### NOTICE

Two remote key fobs can be synchronized to the generator at one time.

#### NOTICE

Changing a remote key fob battery may not require the user to reset the remote. If remote does not function after changing the battery, proceed with Wireless Set Button instructions.

#### **Starting the Engine**

- 1. Make certain the generator is on a flat, level surface.
- 2. Turn the gasoline fuel valve to the "ON" position.

#### **Wireless Remote Start**

Wireless remote starting is only possible within 80 feet of the generator.

DO NOT attempt to adjust the choke. The remote system will automatically close and open the choke.

1. Press the START/STOP button once. The button will flash green.

Press and release the "START" button on the remote control. DO NOT hold the button down, only press the button once. The engine will attempt to start six times.

#### **Electric Start**

DO NOT attempt to adjust the choke. The remote system will automatically close and open the choke.

1. Press the START/STOP button once. The button will flash green but the generator will not attempt to start.

Press the START/STOP button a second time. The button will now flash green once per half second and the generator will attempt to start. There will be (6) starting attempts. After generator starts, the button will turn solid green.

#### **Manual Start**

- 1. Disconnect all electrical loads from the generator. Never start or stop the generator with electrical devices turned on.
- 2. Press the START/STOP button once. The button will flash green.

3. Move the choke to the "CHOKE" position or press the choke button until illuminated green.

3a. For restarting a warm engine, move the choke to 75% of the "CHOKE" position.

 Pull the recoil cord slowly until resistance is felt and then pull rapidly. If several pulls are required or starting in cold ambient temperature < 59°F (15°C), see notices below.</li>

#### NOTICE

For gasoline starting in cold ambient temperature < 59°F (15°C), the choke must be in 100% "CHOKE" position. Do not over-choke. As soon as engine starts, gradually move the choke lever to the "RUN" position over a 2-5 second duration.

#### NOTICE

For gasoline restarts with hot engine in hot ambient temperature > 86°F (30°C), keep the choke in 75% of the "CHOKE" position for only 1 pull of the recoil cord. After first pull, move choke to the "RUN" position for 3 more pulls of the recoil cord. If still no start, repeat the sequence starting with choke in 75% of the "CHOKE" position and check that fuel valve is turned to "ON" position or see troubleshooting section. Too much choke leads to spark plug fouling/engine flooding due to lack of incoming air. This will cause the engine not to start.

#### NOTICE

Keep choke in "CHOKE" position for only 1 pull of the recoil cord. After first pull, move choke to "RUN" position for up to 3 pulls of the recoil cord. If still no start, repeat the sequence starting with choke in "CHOKE" position and check that fuel valve is turned to "ON" position or see troubleshooting section. Too much choke leads to spark plug fouling/engine flooding due to lack of incoming air. This will cause the engine not to start.

#### NOTICE

If the engine starts but does not continue to run make certain that the generator is on a flat, level surface. This engine is equipped with a low oil sensor that will prevent the engine from running when the oil level falls below a critical threshold.

#### **Battery**

#### NOTICE

When the START/STOP button is pushed to "STANDBY" mode, the button will flash green if the battery is sending out a charge. If the button does not flash green while in "STANDBY" mode, check that the battery connection is still good.

#### NOTICE

The supplied 12V sealed lead acid (SLA) battery will recharge while the engine is running. When the generator is not in use for extended periods of time, it is recommended that the battery be fully charged at least once a month with a slow charger and disconnected when fully charged or charged using a battery maintainer for long-term storage (not included).

#### **Connecting Electrical Loads**

Let the engine stabilize and warm up for a few minutes after starting.

Plug in and turn on the desired 120 or 240 (if applicable) Volt AC single phase, 60 Hz electrical loads.

- D0 N0T connect 3-phase loads to the generator.
- DO NOT overload the generator.

#### **A WARNING**

Always remember to plug your appliances directly into the generator and do not plug the generator power cord into any electrical outlet or connect to the circuit breaker panel in your home. Connecting a generator to your home's electric utility company's power lines, or to another power source, called 'backfeeding' is a dangerous practice that is illegal in many states and municipalities.

This action if done incorrectly could damage your generator, appliances and could cause serious injury or death to you or a utility worker when attempting to restore power during an outage occurrence in the neighborhood who may then unexpectedly encounter high voltage on the utility line and suffer a fatal shock.

Whether injuries occur or not, if installed incorrectly and not to applicable laws and codes, you may be subject to fines or the utility company may disconnect your home power should this practice be found in your home.

If the generator will be connected to a building electrical system, those connections must isolate the generator power from the utility power. You are responsible for ensuring your generator's electricity does not backfeed into the electric utility power lines. These connections must comply with all applicable laws and codes — Consult your local utility company or a qualified electrician to properly install this connection.

#### **Do Not Overload Generator**

#### Capacity

Follow these simple steps to calculate the running and starting watts necessary for your purposes:

- Select the electrical devices you plan on running at the same time.
- 2. Total the running watts of these items. This is the amount of power you need to keep your items running.
- Identify the highest starting wattage of all devices identified in step 1. Add this number to the number calculated in step 2. Starting wattage is the surge of power needed to start some electric driven equipment. Following the steps listed under "Power Management" will guarantee that only one device will be starting at a time.
- 4. If the generator power output is cut off due to an overload condition indicated by the AC overload blinking light, lower the load by unplugging one or more items, then press the AC overload reset button before restarting the generator for continued normal operation.

#### **Power Management**

Use the following formula to convert voltage and amperage to watts:

#### Volts × Amps = Watts

To prolong the life of your generator and attached devices, follow these steps to add electrical load:

- 1. Start the generator with no electrical load attached.
- 2. Allow the engine to run for several minutes to get up to temperature.
- 3. Plug in and turn on the first item. It is best to attach the item with the largest load first.
- 4. Allow the engine to stabilize.
- 5. Plug in and turn on the next item.
- 6. Allow the engine to stabilize.
- 7. Repeat steps 5-6 for each additional item.

#### NOTICE

Never exceed the specified capacity when adding loads to the generator.

#### Eco (Economy) Mode

The Eco Mode button can be activated to turn on economy control in order to minimize fuel consumption and noise while operating the unit during times of reduced electrical output. Eco Mode allows the engine speed to idle during periods of non-use.

The engine speed returns to normal when an electrical load is connected. When the economy switch is off, the engine runs at normal speed continuously.

#### **A** CAUTION

For periods of high electrical load or momentary fluctuations, the Eco Mode should be off.

#### **12V DC Automotive Style Outlet**

The 12V DC outlet(s) can be used with supplied accessories and other commercially available 12V DC automotive style plugs.

Confirm the input voltage range of your item is at least 12-24V DC.

#### **A WARNING**

Do not operate a device while it is plugged in to the 12V DC outlet.

Prolonged exposure to engine exhaust can cause serious injury or death.

#### **A WARNING**

While charging a device do not place on the exhaust side of the generator. Extreme heat caused by exhaust can damage the device, and cause a potential fire hazard.

#### **Battery Charging**

- Before connecting the battery charging cable (not included) to a battery that is installed in a vehicle, disconnect the vehicle battery ground cable from the negative (-) battery terminal.
- 2. Plug the battery charging cable into the 12V DC receptacle of the generator.
- 3. Connect the red (+) battery charger lead to the red (+) battery terminal.

- Connect the black (–) battery charger lead to the black (–) battery terminal.
- 5. Start the generator.

**Important:** The 12V DC outlet is ONLY to be used with supplied accessories and other commercially available 12V DC automotive style plugs. Be sure all electric devices including the lines and plug connections are in good condition before connection to the generator.

#### **A WARNING**

Do not start the vehicle while the battery charging cable is connected and the generator is running. It will not give the battery a boost of power. The vehicle or the generator may be damaged. Charge only vented wet lead acid batteries. Other types of batteries may burst, causing personal injury or damage.

#### NOTICE

Be sure all electric devices including the lines and plug connections are in good condition before connection to the generator.

#### **Parallel Operation**

The Champion model 200953 is parallel ready and can be operated in parallel with another Champion unit to increase the total available electrical power. A Champion model 100333 parallel kit (sold separately) is required for parallel operation. For a list of compatible models or to order a parallel kit, please call customer service at 1-877-338-0999 or visit www.championpowerequipment.com.

Detailed instructions for parallel kit installation and operation of the connected generators are provided in the parallel kit operator's manual.

#### **Stopping the Engine**

#### **Remote Stop**

- Turn off all electrical connected loads. Never start or stop the generator with electrical devices turned on.
- Let the generator run at no-load for several minutes to stabilize internal temperatures of the engine and generator.
- 3. Press the "STOP" button on the remote.

#### NOTICE

Engine will shut off but the START/STOP button will remain in "STANDBY" mode for 12 hours and fuel valve will remain in the "ON" position waiting for the next start instruction.

To completely shut down the generator, make sure the START/ STOP button is in "OFF" mode and no longer flashing green and fuel valve is turned to "OFF" position when the generator will not be used for an extended period of time.

#### NOTICE

Battery power is drawn while the generator is in standby mode (START/STOP button flashing green).

The generator will stay in standby mode for 12 hours if shut down using the Remote Control.

To turn standby mode off manually, push and hold the "STOP" button on the remote control for 5 seconds or push and hold the START/STOP button on the control panel for 5 seconds. The RCM will no longer consume any battery power or wait for remote signal. This is indicated by the START/STOP button no longer flashing.

#### **Manual Stop**

- 1. Turn off and unplug all electrical connected loads. Never start or stop the generator with electrical devices turned on.
- 2. Let the generator run at no-load for several minutes to stabilize internal temperatures of the engine and generator.
- 3. Press the START/STOP button.

4. Turn the fuel valve to the "OFF" position.

**Important:** Always ensure that the START/STOP button is "OFF" and not illuminated and fuel valve is in the "OFF" position when the generator will not be used for an extended period of time.

#### NOTICE

If the engine will not be used for a period of two (2) weeks or longer, please see the *Storage* section for proper engine and fuel storage.

#### **Moving the Generator**

- NEVER lift or carry the generator using the folding handle.
- ALWAYS place the generator on its wheels in the upright position.
- ALWAYS turn the generator off and ensure the fuel valve is closed.
- ALWAYS make sure engine and muffler are cooled down before the generator can be handled safely (typically 15-30 minutes).
- Begin by raising the folding handle, found on opposite side of wheels.
- Using the handle, tilt the end of the generator slightly off the ground until balanced on the wheels.
- While maintaining balance, roll the generator to the desired location.

- NEVER tilt sideways while moving the generator.
- Failure to follow these instructions could result in personal injury or damage to the generator.

#### **Operation at High Altitude**

The density of air at high altitudes is lower than at sea level. Engine power is reduced as the air mass and air-fuel ratio decrease. Engine power and generator output will be reduced approximately 3½% for every 1000 ft. of elevation above sea level. At high altitudes increased exhaust emissions can also result due to the increased enrichment of the air fuel ratio. Other high altitude issues can include hard starting, increased fuel consumption and spark plug fouling.

To alleviate high altitude issues other than the natural power loss, CPE can provide a high altitude carburetor main jet. The alternative main jet and installation instructions can be obtained by contacting our Technical Support Team. Installation instructions are also available in the Technical Bulletin area of the CPE website.

The part number and recommended altitude range for the application of the high altitude carburetor main jet is listed in the following table.

In order to select the correct high altitude main jet it is necessary to identify the carburetor model. For this purpose, a code is stamped on the side of the carburetor. Select the correct high altitude jet part number corresponding to the carburetor code found on your particular carburetor.

Carb. Code	High Alt. Jet Part Number	Altitude Range
19716	100056226	3281 ft. (1000 m)
19716	100030033	6562 ft. (2000 m)

#### **A WARNING**

Operation using the alternative main jet at elevations lower than the recommended minimum altitude can damage the engine. For operation at lower elevations, the originally supplied standard main jet must be used. Operating the engine with the wrong engine configuration at a given altitude may increase its emissions and decrease fuel efficiency and performance.

#### **MAINTENANCE**

Make certain that the generator is kept clean and stored properly. Only operate the unit on a flat, level surface in a clean, dry operating environment. DO NOT expose the unit to extreme conditions, excessive dust, dirt, moisture or corrosive vapors.

#### **A WARNING**

Never operate a damaged or defective generator.

#### **A** WARNING

Improper maintenance will void your warranty.

#### NOTICE

For Emission control devices and systems, read and understand your responsibilities for service as stated in the Emission Control Warranty Statement of this manual.

The owner/operator is responsible for all periodic maintenance.

Complete all scheduled maintenance in a timely manner.

Correct any issue before operating the generator.

For service or parts assistance, contact our Technical Support Team at 1-877-338-0999.

#### **Cleaning the Generator**

#### **A** CAUTION

DO NOT spray generator directly with water.

Water can enter the generator through the cooling slots and damage the generator windings. It can also contaminate the fuel system.

- 1. Use a damp cloth to clean exterior surfaces of the generator.
- 2. Use a soft bristle brush to remove dirt and oil.
- Use an air compressor (25 PSI) to clear dirt and debris from the generator.
- Inspect all air vents and cooling slots to ensure that they are clean and unobstructed.

To prevent accidental starting, remove and ground the spark plug wire before performing any service.

#### **Changing the Engine Oil**

Change oil when the engine is warm. Refer to the oil specification to select the proper grade for your operating environment.

 While holding the flat part of the drain tube with pliers or wrench, remove the oil drain bolt with a 10 mm socket (not included) or wrench.

2. Allow the oil to drain completely into an appropriate container.

- 3. Replace the oil drain bolt.
- Add oil according to Add Engine Oil in Assembly section.
   DO NOT OVERFILL. Oil not included for routine maintenance.
- 5. Dispose of used oil at an approved waste management facility.

#### **Cleaning and Adjusting the Spark Plug**

- 1. Remove the spark plug cable from the spark plug.
- 2. Use a spark plug socket tool (not included), or a 13/16 in. (21 mm) socket (not included) to remove the plug.

- 3. Inspect the electrode on the plug. It must be clean and not worn to produce the spark required for ignition.
- 4. Make certain the spark plug gap is 0.024-0.031 in. (0.6-0.8 mm).

- 5. Refer to the spark plug types in Specifications when replacing the plug.
- 6. Firmly re-install the plug.
- 7. Attach the spark plug cable to the spark plug.

#### **Cleaning the Air Filter**

 Unscrew the cover holding the air filter to the assembly by turning the fastener counterclockwise.

- 2. Remove the foam element.
- Wash in liquid detergent and water. Squeeze thoroughly dry in a clean cloth.
- 4. Saturate in clean engine oil.
- 5. Squeeze in a clean, absorbent cloth to remove all excess oil.
- 6. Place the filter in the assembly.
- Reattach the air filter cover and tighten the fastener by turning clockwise.

#### **Cleaning the Spark Arrestor**

- Allow the engine to cool completely before servicing the spark arrestor.
- 2. Remove the two screws holding the cover plate which retains the spark arrestor to the muffler.
- 3. Remove the spark arrestor screen.
- Carefully remove the carbon deposits from the spark arrestor screen with a wire brush.

- 5. Replace the spark arrestor if it is damaged.
- Position the spark arrestor and cover plate on the muffler and attach with the screws removed in step 2.

#### **A** CAUTION

Failure to clean the spark arrestor will result in poor engine performance.

#### NOTICE

Federal and local laws and administrative requirements indicate when and where spark arrestors are required. When ordered, spark arrestors are required for operation of this generator in National Forest lands. In California, this generator must not be used on any forest-covered land, brush-covered land, or grass-covered land unless the engine is equipped with a spark arrestor.

#### **Adjusting the Governor**

#### **A WARNING**

Tampering with the factory set governor will void your warranty.

The air-fuel mixture is not adjustable. Tampering with the governor can damage your generator and your electrical devices and will void your warranty. Contact our Technical Support Team at 1-877-338-0999 for all other service and/or adjustment needs.

#### **Generator Battery**

Your generator is equipped with an automatic battery charging circuit that charges the battery while the engine is running. The battery will maintain a proper charge if the unit is used on a regular basis (about once every two weeks). If it is used less frequently, the battery should be connected to a trickle charger or battery maintainer (not included) to keep the battery properly charged.

Maximum charging rate should not exceed 1.5 amps. Follow the instructions included with the battery charger. The battery should be fully charged at least once per month. If the battery is not able to start the engine, it can be started by manually pulling the engine recoil cord. If the battery voltage is extremely low, the charging circuit may not be able to re-charge the battery. In this case, the battery must be connected to a standard automotive style battery charger for re-charging before it can be used.

#### **Disconnect the Battery**

1. Pull two halves of battery connector apart.

#### **Charge the Battery**

For a generator equipped with batteries for electric starting, proper battery maintenance and storage should be followed. A trickle charger or battery maintainer should be used to charge the battery while the generator is in storage. Maximum charging rate should not exceed 1.5 amps. Follow the instructions included with the trickle charger or battery maintainer. The battery should be fully charged at least once per month.

#### **Remote Control Battery**

#### NOTICE

- Always purchase the correct size and grade of battery most suitable for the intended use.
- Clean the battery contacts and also those of the device prior to battery installation.
- Remove batteries from equipment which is not to be used for an extended period of time.
- Remove batteries if consumed or if product is to be left unused for a long time.

#### **Maintenance Schedule**

Follow the service intervals indicated in the following maintenance schedule.

Service your generator more frequently when operating in adverse conditions.

Contact our Technical Support Team at 1-877-338-0999 to locate the nearest CPE certified service dealer for your generator or engine maintenance needs.

#### **EVERY 8 HOURS OR PRIOR TO EACH USE**

- ☐ Check oil level
- Clean around air intake and muffler

#### FIRST 5 HOURS (BREAK IN)

☐ Change oil

#### **EVERY 50 HOURS OR ANNUALLY**

- Clean air filter
- Change oil if operating under heavy load or in hot environments

#### **EVERY 100 HOURS OR ANNUALLY**

- ☐ Change oil
- ☐ Clean/adjust spark plug
- Clean spark arrestor
- ☐ Clean fuel valve filter\*

#### **EVERY 250 HOURS**

- ☐ Clean combustion chamber\*
- ☐ Check/adjust valve clearance\*

#### **EVERY 3 YEARS**

☐ Replace fuel line\*

<sup>\*</sup>To be performed by knowledgeable, experienced owners or CPE certified service centers.

#### **STORAGE**

#### **A WARNING**

To avoid accidental or unintended ignition of your generator during periods of storage, the following precautions should be followed:

 When storing the generator make sure the START/STOP button is "OFF" and not illuminated and fuel valve is set to the "OFF" position.

#### **Short Term Storage (up to 30 days)**

Ethanol blended gasoline may gum up and clog the carburetor if the generator is not run or carburetor drained within 4 weeks.

- 1. Be sure all appliances are disconnected from the generator.
- Start the generator as instructed in Starting the Engine section.
- 3. Turn the fuel valve to the "OFF" position.
- 4. Let the engine run until fuel starvation has stopped the engine. This usually takes a few minutes.
- If started using remote, press START/STOP button one more time to ensure the generator is "OFF" and not in "STANDBY" mode and blinking green.

#### Mid Term Storage (30 days - 1 year)

Ethanol blended gasoline in the tank has a maximum shelf life of up to 1 year with the addition of a properly formulated fuel stabilizer and stored in a cool, dry place.

- 1. Be sure all appliances are disconnected from the generator.
- 2. Add a properly formulated fuel stabilizer to the gasoline tank.
- 3. Turn the fuel valve to the "ON" position.
- 4. Start and run the generator for 10 minutes so the treated gasoline cycles through the fuel system.

#### 5. Option 1: Drain Gasoline from Carburetor

- 5a. Turn off the generator by pushing the START/STOP button. If started using remote, press START/STOP button one more time to ensure the generator is "OFF" and not in "STANDBY" mode and blinking green.
- 5b. Turn the fuel valve to the "OFF" position.
- 5c. Use the drain bolt on the carburetor to empty any excess gasoline from the carburetor into an appropriate container. Use a funnel (and appropriate hose if necessary) under the carburetor drain bolt to avoid spillage.

5d. When gasoline stops flowing from the carburetor, replace and tighten the carburetor drain bolt and be sure to properly dispose of the drained gasoline according to local regulations or guidelines.

#### 6. Option 2: Run Dry

- 6a. With the generator running, turn the fuel valve to the "OFF" position and allow the generator to run until the engine stops from complete fuel starvation. This may take a few minutes.
- 6b. If started using remote, press START/STOP button one more time to ensure the generator is "OFF" and not in "STANDBY" mode and blinking green.
- 7. Remove the spark plug cap and spark plug and pour about a tablespoon of oil into the cylinder.
- 8. Pull the recoil cord slowly to crank the engine to distribute the oil and lubricate the cylinder.
- 9. Install the spark plug and spark plug cap.
- 10. Clean the generator according to Cleaning the Generator.
- 11. Store the generator in a cool, dry place out of direct sunlight.

#### **Long Term Storage (over 1 year)**

For storage over 1 year, the gasoline tank and carburetor must be completely drained of gasoline.

- The generator is to be OFF and all appliances disconnected.
   Make sure the START/STOP button is not blinking green and in "STANDBY" mode.
- 2. Turn the fuel valve to the "ON" position.
- Use the drain bolt on the carburetor to empty any excess gasoline from the gasoline tank and carburetor into an appropriate container. Use a funnel (and appropriate hose if necessary) under the carburetor drain bolt to avoid spillage.
- 4. When gasoline stops flowing from the carburetor, replace and tighten the carburetor drain bolt and be sure to properly dispose of the drained gasoline according to local regulations or guidelines.
- 5. Turn the fuel valve to the "OFF" position.
- 6. Follow steps 7-11 according to Mid Term Storage.

#### **Removing from Storage**

#### NOTICE

If the generator has been improperly stored for a period longer than 30 days with ethanol blended gasoline in the gasoline tank and/or carburetor, all fuel must be drained and the carburetor must be thoroughly cleaned of ethanol build up. This process involves technically advanced tasks. For assistance please call our Technical Support Team at 1-877-338-0999.

If the gasoline tank and carburetor were properly emptied of all ethanol blended gasoline prior to the generator being stored, follow the below steps when removing from storage.

- 1. Add gasoline to the generator according to Add Fuel.
- 2. Turn the fuel valve to the "ON" position.
- After 5 minutes check the carburetor and air filter areas for any leaking gasoline. If any leaks are found, the carburetor will need to be disassembled and cleaned or replaced. If no gasoline leaks are found, turn the fuel valve to the "OFF" position.
- 4. Check engine oil level and add clean, fresh oil if needed. See *Oil Specifications* for proper oil type.
- Check and clear air filter of any obstructions such as bugs or cobwebs. If necessary, clean air filter according to *Cleaning* the Air Filter.
- 6. Start the generator according to Starting the Engine.

#### **SPECIFICATIONS**

#### **Generator Specifications**

Generator Model	200953
Start Type	Wireless, Electric, Manual
Watts (Starting/Running)	4250/3500
Volts AC	120
AC Amps @ 120V	29.2
Volts DC	
DC Amps	8
Frequency	60 Hz
Phase	Single
Grounding Type	Neutral Floating
Weight	90 lb. (41 kg)
Length	27.9 in. (70.8 cm)
Width	23.4 in. (59.5 cm)
Height	21.7 in. (55 cm)

#### **Engine Specifications**

Model	GB225-2
Displacement	224 cc
Type	4-Stroke OHV
Spark Plug	
OEM Type	F6RTC
Replacement Type	NGK BPR6ES or equivalent
Gap	0.024-0.031 in. (0.6-0.8 mm)
Valve	
Intake Clearance	. 0.004-0.006 in. (0.10-0.15 mm)
Exhaust Clearance	0.006-0.008 in. (0.15-0.20 mm)

#### NOTICE

A technical bulletin regarding valve adjustment procedures is available at www.championpowerequipment.com.

#### **Oil Specifications**

DO NOT OVERFILL.

Type	*See following chart
Capacity	18.6 fl. oz. (550 ml)

#### NOTICE

Temperature will affect engine oil and engine performance. Change the type of engine oil used based on temperature shown in the "Recommended Engine Oil Type" table.

#### **Fuel Specifications**

Use unleaded gasoline with a minimum octane rating of 87 and an ethanol content of 10% or less by volume. DO NOT USE E15 or E85. DO NOT OVERFILL.

Gasoline Capacity 4	nal.	(15.2 L)
---------------------	------	----------

#### **Battery Specifications**

Туре	Rechargeable,	Non-Spillable Lead Acid
Volts DC		12
Capacity		9 Ah

#### **Temperature Specifications**

Starting Temperature Range (°F/°C)	5 to	104/-15 to 40
Remote Starting Temperature		
Range (°F/°C)	5 to	104/-15 to 40

#### NOTICE

An important message about temperature: Your product is designed and rated for continuous operation at ambient temperatures up to 104°F (40°C). When needed, it may be operated at temperatures ranging from 5°F (-15°C) to 122°F (50°C) for short periods of time. If exposed to temperatures outside this range during storage, it should be brought back within this range before operation. In any event, the product must always be operated outdoors, in a well-ventilated area and away from doors, windows and vents.

#### **TROUBLESHOOTING**

Dirty fuel valve. Clean the fuel valve. Clogged spark arrestor. Clean spark arrestor.  Remote control battery is dead. Replace remote control battery. Generator battery is dead. Recharge generator battery.  START/STOP button in "OFF" mode. Generator out of range of remote signal. Obstructions in between generator and remote.  Generator battery is dead. Recharge generator battery.  Generator out of range of remote signal. Remote must be with 80 feet of generator.  Obstructions in between generator and remote.  Generator battery is dead. Recharge generator battery.  START/STOP button in "OFF" mode. Press START/STOP button to "STANDBY" mode then again to "START".  Engine will not start electrically.  START/STOP button in "OFF" mode. #### **WARRANTY\***

CHAMPION POWER EQUIPMENT 3 YEAR LIMITED WARRANTY

#### **Warranty Qualifications**

To register your product for warranty and FREE lifetime call center technical support please visit:

#### https://www.championpowerequipment.com/register

To complete registration you will need to include a copy of the purchase receipt as proof of original purchase. Proof of purchase is required for warranty service. Please register within ten (10) days from date of purchase.

#### **Repair/Replacement Warranty**

CPE warrants to the original purchaser that the mechanical and electrical components will be free of defects in material and workmanship for a period of three years (parts and labor) from the original date of purchase and 270 days (parts and labor) for commercial and industrial use. Transportation charges on product submitted for repair or replacement under this warranty are the sole responsibility of the purchaser. This warranty only applies to the original purchaser and is not transferable.

# Do Not Return The Unit To The Place Of Purchase

Contact CPE's Technical Service and CPE will troubleshoot any issue via phone or e-mail. If the problem is not corrected by this method, CPE will, at its option, authorize evaluation, repair or replacement of the defective part or component at a CPE Service Center. CPE will provide you with a case number for warranty service. Please keep it for future reference. Repairs or replacements without prior authorization, or at an unauthorized repair facility, will not be covered by this warranty.

#### **Warranty Exclusions**

This warranty does not cover the following repairs and equipment:

#### **Normal Wear**

Products with mechanical and electrical components need periodic parts and service to perform well. This warranty does not cover repair when normal use has exhausted the life of a part or the equipment as a whole.

#### Installation, Use and Maintenance

This warranty will not apply to parts and/or labor if the product is deemed to have been misused, neglected, involved in an accident, abused, loaded beyond the product's limits, modified, installed improperly or connected incorrectly to any electrical component. Normal maintenance is not covered by this warranty and is not required to be performed at a facility or by a person authorized by CPE.

#### **Other Exclusions**

This warranty excludes:

- Cosmetic defects such as paint, decals, etc.
- Wear items such as filter elements, o-rings, etc.
- Accessory parts such as starting batteries, and storage covers.
- Failures due to acts of God and other force majeure events beyond the manufacturer's control.
- Problems caused by parts that are not original Champion Power Equipment parts.

When applicable, this warranty does not apply to products used for prime power in place of a utility.

#### Limits of Implied Warranty and Consequential Damage

Champion Power Equipment disclaims any obligation to cover any loss of time, use of this product, freight, or any incidental or consequential claim by anyone from using this product.

THIS WARRANTY AND THE ATTACHED U.S. EPA and/or CARB EMISSION CONTROL SYSTEM WARRANTIES (WHEN APPLICABLE) ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICUL AR PURPOSE.

A unit provided as an exchange will be subject to the warranty of the original unit. The length of the warranty governing the exchanged unit will remain calculated by reference to the purchase date of the original unit.

This warranty gives you certain legal rights which may change from state to state or province to province. Your state or province may also have other rights you may be entitled to that are not listed within this warranty.

■ EMERGENCY 24 HOUR SUPPORT: 1-562-204-1188

<sup>\*</sup>Except as otherwise stipulated in any of the following enclosed Emission Control System Warranties (when applicable) for the Emission Control System: U.S. Environment Protection Agency (EPA) and/or California Air Resources Board (CARB). Whichever warranty applies for the longer period, either this 3 year limited warranty or the applicable Emission Control System Warranty, shall supersede the other.

# CHAMPION POWER EQUIPMENT, INC. (CPE), THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY (U.S. EPA) AND THE CALIFORNIA AIR RESOURCES BOARD (CARB) EMISSION CONTROL SYSTEM WARRANTY

Your Champion Power Equipment (CPE) engine complies with both the U.S. EPA and state of California Air Resources Board (CARB) Exhaust and Evaporative emissions regulations.

#### YOUR WARRANTY RIGHTS AND OBLIGATIONS:

The US EPA, California Air Resources Board, and CPE are pleased to explain the Federal and California Exhaust and Evaporative Emission Control Systems Warranty on your 2022 small off-road engine (SORE) and engine powered equipment. In California, new equipment that use small off-road engines (SORE) must be designed, built and equipped to meet the State's stringent anti-smog standards.

CPE must warrant the exhaust and evaporative emission control system on your small off-road engine (SORE) for the period listed below, provided there has been no abuse, neglect, unapproved modification, or improper maintenance of your equipment leading to the failure of the exhaust and evaporative emission control systems.

Your evaporative emission control system may include parts such as: carburetors, fuel tanks, fuel lines, (for liquid fuel and fuel vapors), fuel caps, valves, canisters, filters, clamps, connectors, and other associated components. Also included for your exhaust emission control system may be the fuel-injection system, the ignition system, catalytic converter and other exhaust emission related assemblies. Where a warrantable condition exits, CPE will repair your small off-road engine (SORE) at no cost to you including diagnosis, parts and labor.

#### **MANUFACTURER'S WARRANTY COVERAGE:**

This exhaust and evaporative emission control system is warranted for two years. If any exhaust and evaporative, emission related part on your engine or equipment is defective in, the part will be repaired or replaced by CPE.

#### **OWNER WARRANTY RESPONSIBILITIES:**

As the small off-road engine (SORE) owner, you are responsible for the performance of the required maintenance listed in your Owner's Manual. CPE recommends that you retain all your receipts covering maintenance on your small off-road engine (SORE), but CPE cannot deny warranty coverage solely for the lack of receipts.

As the small off-road engine (SORE) owner, you should be aware that CPE may deny you warranty coverage if your small off-road engine (SORE) or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.

You are responsible for presenting your small off-road engine to an Authorized CPE distribution center, service center or alternate service outlet as described in (3)(f) below or CPE dealer or CPE, Santa Fe Springs, Ca. as soon as the problem exists. The warranty repairs shall be completed in a reasonable amount of time, not to exceed 30 days.

If you have any questions regarding your warranty coverage, you should contact:

Champion Power Equipment, Inc.
Customer Service

Santa Fe Springs, CA 90670
1-877-338-0999
tech@championpowerequipment.com

#### **EXHAUST AND EVAPORATIVE EMISSION CONTROL SYSTEM WARRANTY**

The following are specific provisions relative to your Exhaust and Evaporative Emission Control System (ECS) Warranty Coverage.

 APPLICABILITY: This warranty shall apply to 1995 and later model year California small off-road engines (SORE) (for other states, 1997 and later model year engines). The ECS Warranty Period shall begin on the date the new engine or equipment is delivered to its original, end-use purchaser, and shall continue for 24 consecutive months thereafter.

#### 2. GENERAL EMISSIONS WARRANTY COVERAGE

CPE warrants to the original, end-use purchaser of the new engine or equipment and to each subsequent purchaser that each of its small off-road engines (SORE) is:

- 2a. Designed, built and equipped to conform to U.S. EPA emissions standards for spark-ignited engines at or below 19 kilowatts and all applicable regulations adopted by the California Air Resources Board and
- 2b. Free from defects in materials and workmanship that cause the failure of a warranted part to be identical in all material respects to the part as described in the engine manufacturer's application for certification for a period of two years.

#### 3. THE WARRANTY ON EXHAUST AND EVAPORATIVE EMISSION-RELATED PARTS WILL BE INTERPRETED AS FOLLOWS:

- 3a. Any warranted part that is not scheduled for replacement as required maintenance in the Owner's Manual shall be warranted for the ECS Warranty Period. If any such part fails during the ECS Warranty Period, it shall be repaired or replaced by CPE according to Subsection "d" below. Any such part repaired or replaced under the ECS Warranty shall be warranted for any remainder of the ECS Warranty Period.
- 3b. Any warranted, exhaust and evaporative emissions-related part which is scheduled only for regular inspection as specified in the Owner's Manual shall be warranted for the ECS Warranty Period. A statement in such written instructions to the effect of "repair or replace as necessary", shall not reduce the ECS Warranty Period. Any such part repaired or replaced under the ECS Warranty shall be warranted for the remainder of the ECS Warranty Period.
- 3c. Any warranted, exhaust and evaporative emissions-related part which is scheduled for replacement as required maintenance in the Owner's Manual shall be warranted for the period of time prior to the first scheduled replacement point for that part. If the part fails prior to the first scheduled replacement, the part shall be repaired or replaced by CPE according to Subsection "d" below. Any such exhaust and evaporative emissions-related part repaired or replaced under the ECS Warranty, shall be warranted for the remainder of the ECS Warranty Period prior to the first scheduled replacement point for such emissions-related part.
- 3d. Repair or replacement of any warranted, exhaust and evaporative emissions-related part under this ECS Warranty shall be performed at no charge to the owner at a CPE Authorized Service Outlet.
- 3e. The owner shall not be charged for diagnostic labor which leads to the determination that a part covered by the ECS Warranty is in fact defective, provided that such diagnostic work is performed at a CPE Authorized Service Outlet.
- 3f. CPE shall pay for covered exhaust and evaporative emissions warranty repairs at non-authorized service outlets under the following circumstances:
  - i. The service is required in a population center with a population over 100,000 according to U.S. Census 2000 without a CPE Authorized Service Outlet AND
  - ii. The service is required more than 100 miles from a CPE Authorized Service Outlet. The 100 mile limitation does not apply in the following states: Alaska, Arizona, Colorado, Hawaii, Idaho, Montana, Nebraska, Nevada, New Mexico, Oregon, Texas, Utah and Wyoming.
- 3g. CPE shall be liable for damages to other original engine components or approved modifications proximately caused by a failure under warranty of an emission-related part covered by the ECS Warranty.
- 3h. Throughout the ECS Warranty Period, CPE shall maintain a supply of warranted exhaust and evaporative emission-related parts sufficient to meet the expected demand for such exhaust and evaporative emission-related parts.
- 3i. Any CPE Authorized and approved exhaust and evaporative emission-related replacement part may be used in the performance of any ECS Warranty maintenance or repair and will be provided without charge to the owner. Such use shall not reduce CPE's warranty obligation.
- 3j. Unapproved add-on or modified parts may not be used to modify or repair a CPE engine. Such use voids this ECS Warranty and shall be sufficient grounds for disallowing an ECS Warranty claim. CPE shall not be liable hereunder for failures of any warranted parts of a CPE engine caused by the use of such an unapproved add-on or modified part.

# EMISSION-RELATED PARTS INCLUDE THE FOLLOWING: (using those portions of the list applicable to the engine)

Systems covered by this warranty	Parts Description
Fuel Metering System	Carburetor and internal parts (and/or pressure regulator or fuel injection system), Air/fuel ratio feedback and control system, Cold start enrichment system.
Air Induction System	Controlled hot air intake system, Intake manifold, Air filter.
Ignition System	Spark plug, Magneto or electronic ignition system, Spark advance/retard system.
Exhaust Gas Recirculation (EGR) System	EGR valve body, and carburetor spacer if applicable, EGR rate feedback and control system.
Air Injection System	Air pump or pulse valve, Valves affecting distribution of flow, Distribution manifold.
Catalyst or Thermal Reactor System	Catalytic Converter, Thermal Reactor, Exhaust Manifold.
Particulate Controls	Traps, Filters, Precipitators, and any other device used to capture particulate emissions.
Miscellaneous items used in Above Systems	Vacuum, Temperature, and time sensitive valves and switches, Electronic Controls, Hoses, Belts, Connectors, and Assemblies.
Evaporative Controls	Fuel Tank, Fuel Cap, Fuel Lines (for liquid fuel and fuel vapors), Fuel Line Fittings, Clamps, Pressure Relief Valves, Control Valves, Control Solenoids, Electronic Controls, Vacuum Control Diaphragms, Control Cables, Control Linkages, Purge Valves, Gaskets, Liquid/Vapor Separator, Carbon Canister, Canister Mounting Brackets, Carburetor Purge Port Connector.

#### TO OBTAIN WARRANTY SERVICE:

You must take your CPE engine or the product on which it is installed, along with your warranty registration card or other proof of original purchase date, at your expense, to any Champion Power Equipment dealer who is authorized by Champion Power Equipment, Inc. to sell and service that CPE product during his normal business hours. Alternate service locations defined in Section (3)(f) above must be approved by CPE prior to service. Claims for repair or adjustment found to be caused solely by defects in material or workmanship will not be denied because the engine was not properly maintained and used.

If you have any questions regarding your warranty rights and responsibilities, or to obtain warranty service, please write or call Customer Service at Champion Power Equipment, Inc.
